SUMMARY

Software Engineer with 5+ years building LLM-native products and AI-powered workflow automation end-to-end. Expert in Claude API, multi-agent orchestration, MCP, RAG pipelines, and vector search with production experience in Greenhouse, Lever, and Ashby integrations. Proven track record shipping 0→1 AI products with rapid prototyping and end-to-end ownership in high-autonomy environments.

WORK EXPERIENCE

Software Engineer II

Florida State University

Nov 2024 – Present

Tallahassee, FL

- Led 0→1 generative AI product development: built multi-agent orchestration system with Claude Sonnet API (3 agents, 11 specialized tools), including self-healing code agent that auto-diagnoses and fixes tool failures—prototype to production in days.
- Designed and implemented AI-native workflows end-to-end: built prompt engineering frameworks, tool-use patterns, MCP server (20+ tools), and evaluation pipelines; shipped LLM-powered features with real-time SSE streaming to production frontend.
- Worked directly with internal stakeholders (facility managers, operations teams) to identify highest-impact problems, gather hard feedback, and iterate rapidly—full ownership of product and architecture decisions without gatekeeping.
- Shipped production full-stack application (Next.js 14, TypeScript, Python/FastAPI) with 37 API endpoints, vector career memory (LanceDB, 384-dim embeddings), and semantic matching achieving 99.2% system reliability.
- Built Greenhouse, Lever, and Ashby API integrations for career platform automation; designed platform abstraction layer supporting 5 ATS providers with auto-discovery of new companies.

Research Engineer

Prof. Olmo Zavala Romero — FSU

Jan 2023 – Aug 2024

Tallahassee, FL

- Prototyped and pathfound RAG pipelines and vector search on 1TB+ unstructured datasets; evaluated 5+ embedding models and 3 vector databases; productionized semantic search with sub-200ms latency and 95% retrieval accuracy.
- Built full-stack analytics platform (React + Python/FastAPI) with Elasticsearch powering real-time search across 50M+ records; designed user-centered interfaces for non-technical operators.
- Made product and architecture decisions independently in low-structure research environment: scoped work, made smart tradeoffs under time pressure, shipped iteratively with rapid feedback cycles.
- Built distributed data pipelines on AWS EMR/EC2 processing 1TB+ datasets using Python (PySpark); achieved +40% throughput and 99% job success rate through optimization and partitioning strategies.

Software Engineer

Aspire Systems

Oct 2020 – Jul 2022

Chennai, India

- Delivered end-to-end enterprise software: Java/Spring Boot + React microservices processing 500K+ events/day via Kafka; owned architecture through production with 99.5% availability.
- Mentored 5 engineers on microservices patterns and distributed systems; established code review standards improving team velocity by 25%; achieved 90% test coverage with TDD/BDD.
- Built production observability (Prometheus, Grafana, distributed tracing); ran 24/7 on-call reducing MTTR by 60% through systematic incident response and automated runbooks.
- Collaborated cross-functionally with product, operations, and QE teams; shipped iteratively with rapid feedback cycles, driving data integration workflows connecting enterprise systems.

PROJECTS

- **AI Career Automation Platform** [GitHub](#) — 0→1 LLM-native product using Claude Sonnet API with multi-agent orchestration (3 parallel agents, 11 tools, self-healing code agent), MCP server (20+ tools), and vector career memory (LanceDB, 5 tables, 384-dim embeddings). Integrated Greenhouse, Lever, Ashby APIs with platform abstraction. Shipped LaTeX-aware diffs, semaphore-based concurrency, real-time SSE streaming. Tech: TypeScript, Next.js 14, Claude API, MCP, LanceDB, PostgreSQL, Docker.
- **Enterprise Slack Bot — AI Workflow Automation** [GitHub](#) — Productionized LLM-based enterprise Slack integration; built AI agent with tool integrations, Socket Mode WebSocket for real-time responses, 24/7 availability, sub-40s response times. Shipped to production users who provide daily feedback. Tech: Python, Node.js, OAuth 2.0, WebSockets.
- **Distributed Data Pipeline Platform** [GitHub](#) — Architected real-time ingestion with Spark + Kafka on Kubernetes; multi-source enterprise data integration processing 10K+ events/sec. Built monitoring dashboards for system health. Tech: Python, PySpark, Kafka, Kubernetes, Docker.

TECHNICAL SKILLS

- **AI/LLM & Agent Systems:** Claude API (Sonnet, Tool Use), Multi-Agent Orchestration, MCP (Model Context Protocol), RAG Pipelines, Vector DBs (LanceDB), Prompt Engineering, Embedding Models (all-MiniLM-L6-v2), LLMs (GPT-4, Llama 3.3), AI Evals
- **Full-Stack & Product:** TypeScript, React 18, Next.js 14, Python/FastAPI, Node.js, Monaco Editor, Zustand, Tailwind CSS, SSE/WebSocket Streaming

- **Data & Infrastructure:** PostgreSQL (Drizzle ORM), Redis, Elasticsearch, Docker, AWS (Lambda, SQS/SNS, S3, EC2), Kubernetes, CI/CD (GitHub Actions)
- **Integrations & Automation:** Greenhouse API, Lever API, Ashby API, Playwright Browser Automation, Cheerio HTML Parsing, Slack API (Socket Mode)
- **Practices:** 0→1 Product Development, End-to-End Ownership, Direct Stakeholder Collaboration, Rapid Prototyping, TDD/BDD (85%+ coverage), Agile/Scrum

EDUCATION

Florida State University
M.S. in Computer Science

Tallahassee, FL

- **Relevant Coursework:** Distributed Systems, Advanced Database Systems, Machine Learning, Algorithms

SRM Institute of Science & Technology
B.Tech. in Computer Science

Chennai, India

PUBLICATIONS & AWARDS

- **2nd Place, SRM University Hackathon (2019)** — Built end-to-end data-driven application in 24 hours; designed ML-based review classification system from problem discovery to working demo.
- Review Classification & False Feedback Detection — Published in IJAST; built production ML pipeline for large-scale unstructured text analysis.
- AWS Solutions Architect Course (Udemy, 2024) | Active participant in AI/ML hackathons and rapid prototyping challenges.
